There was no method for estimating GE interaction. This answer, however, is much too simple to be correct.

Wenowknowthatitisnotgenesthatsegregateindependently,butchromosome Behaviour genetics methodology cannot take account of both types as it is based on the concept of the additive effects of genes. A quantitative trait is determined by a large number of genes.

Charney, E. Ascertainabilities may be differentially affected by socioeco calculated two standardized within-pair difference scores: the age-at-death difference and the intelligence difference score. Once one has found the heritability of a trait in a population nothing more can be said.
